

SAWTOOTH OUTDOOR P R O D U C T S

Serveless Peep it Installation Instructions

1.1 Use extreme care when removing existing string serving from bow. Bow press must be used. DO NOT use string splitter for this application.

1.2 Remove existing peep and thoroughly inspect string before the next step. (DANGER) Replace any string that may be to unsafe to shoot.

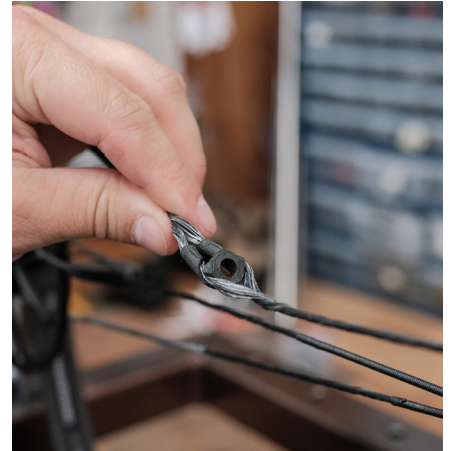

1.3 Evenly separate string into two halves.

1.4 With the Peep-It posts facing the top cam, Place one side of the peep into the provided groove. Then repeat this process on the other side.

1.5 Insure that all string strands are routed into grooves properly.

1.6 With the bow string relaxed, remove the wax within a 3 inch area of where the peep will be installed. Mark the spot where the previous peep was embedded before removing the old peep.

1.7 Verify correct installation before next step.

1.8 Bow string may now be put back under full pressure.

1.9 Fine tuning may be required. Moving the peep it up or down minimally without relaxing the string may cause residual wax to build up in the grooves within the posts. Wax is by nature a lubricant. The best result is to relax the bowstring, and move the peep it up or down accordingly.
